

V-CREST

C++ Project Defense

What do we do?

- This is a unique video creating software developed to help a user build a video out of a set of images.
- The main feature is to merge images automatically according to the beats of an audio file analyzed by our software .
- Further features include adding simple animations and certain editing features to individual images of the video.

Teams

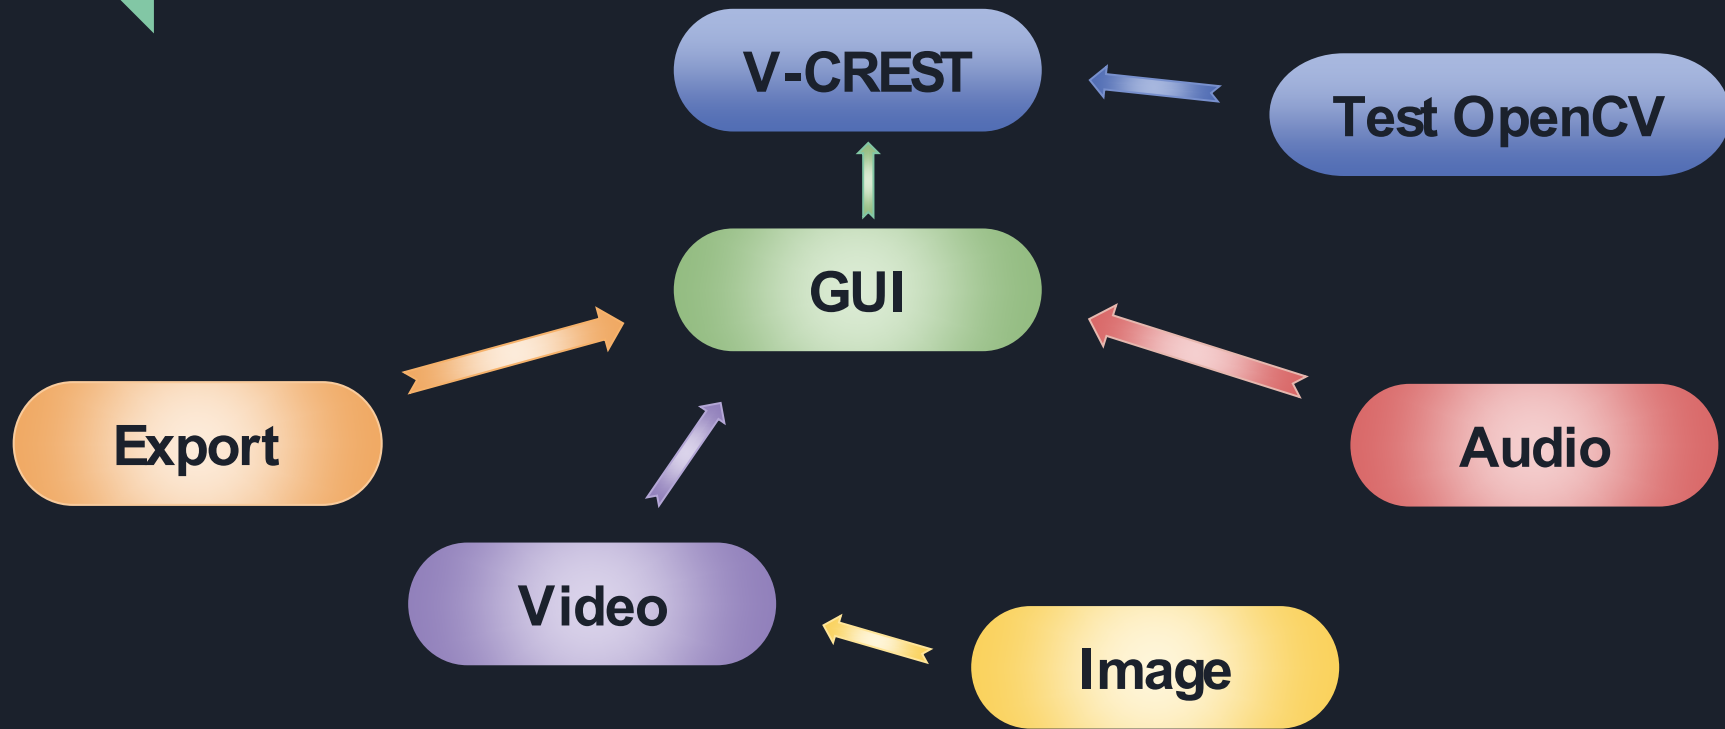

Audio	Lasha Koroshinadze	Hayate Sasaki
GUI	Duy Nhat Vo Nguyen	Minh Tung
	Minjoo Kim	Duc Hieu Le
Image	Vrushank Agrawal	Yi Yao Tan
Video	Dimitri Korkotashvili	Lucia Carai
	Yufei Liu	

Softwares Used

- CLion
- CMake
- OpenCV
- Qt 6.2.2
 - QtMultimedia
- Lame and Aubio
- FFmpeg

Code Architecture

Functions:
write/ display
ImageAnimator Class

Video

GUI

Test Video

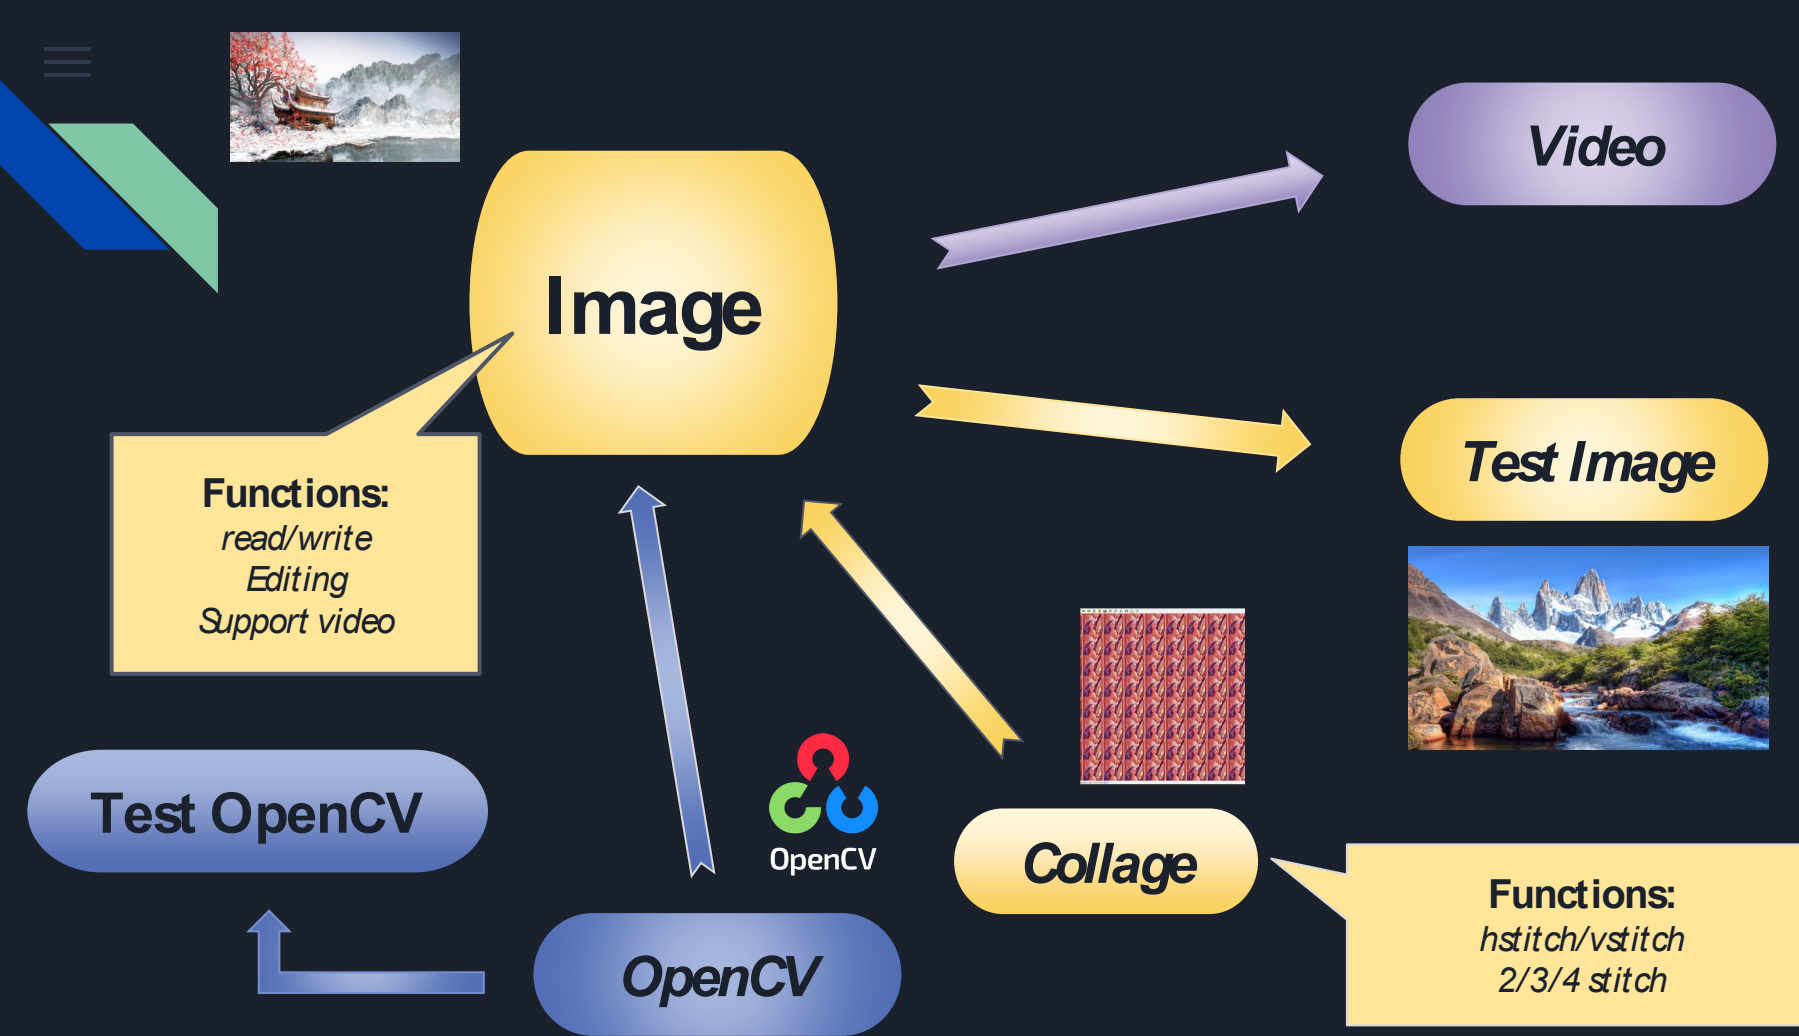

Image

Video Animator

Functions:
Rotation, Zooming
and fading

Export

Functions:

get_dir
merge

FFmpeg

GUI

Test Export

test1

test-final

Additional Features

3-stitch

4-stitch

2-stitch

4-stitch recursive

Project Timeline

Week 1

Week 2

Week 3

Week 4

Project repository made.
Work divided among teams.
Vision set.

Initial classes written.
CMake working.
Namespaces set.

Class test functions created.
Initial GUI window finalized.
OpenCV integration started.

Basic structure of all classes
tested and finished. Code
merged & second leg begins.

Week 5

Week 6

Week 7 + Vacations

Week 8

Image integration with GUI
and Video began.
Audio libraries integrated.

Video & GUI integration began.
Image integration finished.
Export class created & tested.

Audio class integration began.
Code refactored & recompiled.
All functions optimised.

Export & audio class integrated.

PRODUCT FINISHED

Big Question

*HOW DO YOU USE THE
SOFTWARE ??!!*

Simple Answer

LIVE DEMO!
